 Healthcare Anytime Anyplace Available Affordable

StayCured Medical Clinic

StayCured Medical Clinic is an established healthcare provider headquartered in Hyderabad, India, with clinical facilities in Nacharam, Telangana, and Coimbatore, Tamil Nadu. StayCured provides four key services: 1) Conventional Healthcare, 2) Telemedicine Healthcare, 3) Medical Second Opinion, and 4) Medical Expert Presence.

What We Do

StayCured provides consultation on all commonly encountered diseases, and devises treatment plans customized to patients based on diagnoses and medical history. We monitor the recovery of patients to ensure that treatment plans are effective and produce the desired clinical outcomes.

Imperative

Our imperative is the make healthcare readily available and affordable to the general public. We satisfy this by delivering Conventional Healthcare at strategically located clinical centers, and Telemedicine Healthcare through a set of transformative technologies we have independently funded, researched, developed, and deployed globally.

StayCured Online

StayCured Online is a comprehensive internet and mobile cloud platform through which patients and medical providers converge and conduct business. The platform has over 5,000 Patients, 100 Doctors, 50 Specialists, 10 Labs, and 5 Pharmacies. This is a virtual healthcare community or campus that serves as a single venue where patients can satisfy all their healthcare needs, making healthcare readily available and very affordable to the general population.

Healthcare Disruption

Traditional methods for delivering healthcare are now disrupted by the innovative business practices and creative technology solutions available in StayCured Online. All interactions between Patients and Providers are transacted digitally. Patients can perform Self Triage, take their own Vitals through an innovative App, consult with Specialists anytime and anyplace, and conveniently pickup their medications from local pharmacies. This now expedites the delivery of healthcare, making critical care available to everyone at very affordable prices.

StayCured App

Vitals

Through the StayCured App patients are able to take their own vitals and perform self triage. By a simple fingertip touch patients obtain their Blood Pressure, Oxygen Saturation, Heart Rate, Respiration Rate, Body Temperature, Body Mass Index, Electro Cardiogram, and a full history of their vitals over time.

Consultations

Medical practitioners and specialists are able to consult directly with patients through video calls on the App. The Vitals and Self Triage performed by patients are also immediately accessible to the consulting specialists on the App, greatly simplifying and expediting the delivery of healthcare.

Women Health Cycles

The App is equipped with features and functions specifically geared towards women health. The **Period Tracker** enables women to very effectively manage their monthly cycles, forecast their fertile time, and predict ovulation dates, giving women greater control of their social and professional life. Then there is the **Pregnancy Tracker** that charts the entire pregnancy cycle from the time of conception of the fetus to delivery of the newborn. This is a tool that every aspiring mother must have.

Upcoming Features and Functions

Several new modules will be added to the StayCured App in the coming months. These include Vision Test (Eye Test), Hearting Test, Baby Heartbeat Recording, and Heart Sound Analysis. Also if the R&D works out then in 18 months there will be a Blood Sugar Test, meaning no more finger pricking for diabetic patients.
